

What are Natural Resources?

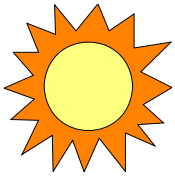

1. What are natural resources? Please define.

2. Name five things that come from natural resources.

3. What is the mineral used to make aluminum cans called? Where is one place it can be found?

4. What is a non-renewable natural resource?

5. What do you think you can do to help conserve our natural resources?

What are Natural Resources?

Answers:

1. What are natural resources? Please define.

Natural resources come from nature and are used or turned into the things we want and need to survive.

2. Name five things that come from natural resources.

Food, heat, cans, television, toys, soda...anything will work here.

3. What is the mineral used to make aluminum cans called? Where is one place it can be found?

Bauxite. Tropical rainforests.

4. What is a non-renewable natural resource?

A resource that nature cannot create again once it has been used.

Example: oil

5. What do you think you can do to help conserve our natural resources?

Use less, use renewable resources, alternatives, 3 R's, think about wants versus needs.
